BAHA (bone-anchored hearing aid)

We provide coverage for this procedure for adult and pediatric (5 years old and older) members who meet medical necessity criteria. Submit authorization requests through the e-referral system.

The submitter will receive a prompt to complete a questionnaire to determine the appropriateness of the requested service. The questions are listed below.

If all questions are answered, e-referral will either approve or pend the case. If the case pends and we cannot authorize it, we will contact the provider for additional clinical information. Authorization is not a guarantee of payment.

Payment is based on established claim edits. We will retrospectively monitor compliance with this authorization requirement.

Applicable procedure codes: *69714, *69715, *69717, *69718

*CPT codes, descriptions and two-digit numeric modifiers only are copyright 2019 American Medical Association. All rights reserved.

See below for the questions you’ll encounter in the e-referral system.

Preview questionnaire:
BAHA (bone-anchored hearing aid)
For BCN HMO℠ (commercial) and BCN Advantage℠ members
Effective March 17, 2020

Q Does the patient have CONDUCTIVE OR MIXED hearing loss and chronic external otitis or otitis media?
   Possible answers: ☐ Yes ☐ No ☐ N/A

Q Does the patient have CONDUCTIVE OR MIXED hearing loss and tumors of the external canal and/or tympanic cavity?
   Possible answers: ☐ Yes ☐ No ☐ N/A

Q Does the patient have CONDUCTIVE OR MIXED hearing loss and chronic dermatitis of the external canal prohibiting the use of an air conduction hearing aid AND a pure tone average bone conduction threshold measured at 0.5, 1, 2, and 3 kHz or better than or equal to ONE of the following (A-C)?
   A. 45 dB (OBC and BP100, Baha 4 and Baha 5 devices)
   B. 55 dB (Intenso device)
   C. 65 dB (Cordele II and Baha 5 SuperPower devices)
   Possible answers: ☐ Yes ☐ No ☐ N/A

Q Does the patient have SINGLE SIDED SENSORINEURAL deafness and normal hearing in the other ear with a pure tone average air conduction threshold of the normal ear better than 20 dB measured at 0.5, 1, 2, and 3 kHz?
   Possible answers: ☐ Yes ☐ No ☐ N/A

Q For requests for BILATERAL implantation, does the patient have symmetrically conductive or mixed hearing loss as defined by a difference between left and right-side bone conduction threshold of less than 10 dB on average measured at 0.5, 1, 2, and 3 kHz (4 kHz for OBC and Ponto Pro), or less than 15 dB at individual frequencies? NOTE: If request is for single-sided implantation only, you MUST select N/A
   Possible answers: ☐ Yes ☐ No ☐ N/A
