Contrast-Enhanced Coronary CT Angiography (CCTA)

Blue Care Network provides coverage for Contract-Enhanced Coronary CT Angiography (CCTA) performed by multidetector CT scanners that have 64 or more detectors for members who meet medical necessity criteria. CCTA performed in the outpatient treatment setting requires clinical review. Submit prior authorization requests through e-referral. The submitter will receive a prompt to complete a questionnaire to determine the appropriateness of the requested service. The questions are listed below. If all questions are answered, e-referral will either approve or pend the case. If the case pend and BCN cannot authorize it, BCN will contact the provider for additional clinical information. Authorization is not a guarantee of payment. Payment is based on established claim edits. Compliance with this prior auth service will be monitored retrospectively.

1. Does the patient have:

2. New onset of chest pain in a low to intermediate risk patient as indicated by a Framingham risk score of greater than 10? □ Yes □ No

3. Stress test results that are inconclusive or not consistent with other clinical evidence where CCTA is being requested as an alternative to invasive coronary angiography? □ Yes □ No

4. The need for assessment of coronary or pulmonary venous anatomy for pre-surgical planning OR prior to invasive radiofrequency ablation for atrial fibrillation? □ Yes □ No

5. The need for non-invasive coronary arterial mapping, including internal mammary artery prior to repeat cardiac surgical revascularization? □ Yes □ No

6. Cardiac or major thoracic surgery scheduled AND the need to exclude coronary artery disease for which CCTA is requested as an alternative to invasive coronary angiography? □ Yes □ No

7. An incomplete invasive catheterization result for which CCTA is requested as an alternative to repeat invasive catheterization? □ Yes □ No

8. The need for assessment of a complex congenital heart disease including anomalies of coronary circulation, great vessels, and cardiac chambers and valves? □ Yes □ No

9. The need for evaluation of cardiac mass (suspected tumor or thrombus) AND technically limited images from echocardiogram, MRI or Transesophogeal echocardiogram? □ Yes □ No

10. The need for a cardiac evaluation in a patient with technically limited images from echocardiogram, MRI or Transesophogeal echocardiogram? □ Yes □ No

11. Symptoms needing an evaluation for a patient with a history of a coronary bypass graft or coronary stent patency to facilitate decision making for additional testing with invasive coronary angiography? □ Yes □ No
